Revised with the addition of GGTAlexandrinus.ttf on 27 May, 2018

Sample text: Matthew 5:30, which contains all letters of the Greek alphabet. All at 12 point.

About these fonts

- These fonts (named with prefix GGT-) are provided *as is*, subject to some restrictions, and with no warranty or liability.
- The fonts map character codes in the range 32-255 into letters and nonspacing diacritics. This is the old way of doing things, not the Unicode way.
- The zero-space accenting technique works well with Word, and pdf from Word, and with Firefox and Chrome, but not with earlier versions of Internet Explorer.
- See the user manuals (below, in pdf) for sample texts rendered and more information.
- The GgtAmos2 and GgtHosea2 fonts have vowels but not cantillation signs, which allows the letters themselves to be larger in the same vertical space, as less height is used.
- The GGTSinaiticusNac and P75Nac fonts have zero space characters where the -Acc equivalents have accents and other diacritics, so diacritics can be removed and restored simply by a font change. For other fonts, the diacritics must be removed by editing the textual document. Obviously, the Masoretic symbols are incongruous when used with some of the fonts, but their availability does no harm.
- Download the fonts by clicking and selecting *save* (not *open*, which just displays some characters in the font) and copying to your Fonts directory. On some browsers you need to right click and save the target.

More about these fonts

The fonts all have the same basic coding convention, so texts can be switched between fonts at will. This applies to the standard letters and diacritics, but not digamma qoppa, sampi, and other symbols, which may be a font-specific character, such as a digraph.

The fonts use <, >, and & for Greek coding, which are HTML sensitive, ***so care should be taken***. However, alternatives for these characters are provided: codes 0206, 0207, 0208 respectively.

The fonts specialise in heaped-up diacritics, e.g: $\overset{\text{̣}}{\alpha}$ $\overset{\text{̣}}{\alpha}$ $\overset{\text{̣}}{\iota}$ $\overset{\text{̣}}{\iota}$ $\overset{\text{̣}}{\iota}$ $\overset{\text{̣}}{\upsilon}$.

GGTEphesian

GGTEphesian is a vertical cursive handwritten-style Greek font with high readability under low resolution, since it uses little calligraphic pen width variation. It was drawn by Graham G Thomason. It specialises in heaped-up diacritics, e.g: $\overset{\text{̣}}{\alpha}$ $\overset{\text{̣}}{\alpha}$ $\overset{\text{̣}}{\iota}$ $\overset{\text{̣}}{\iota}$ $\overset{\text{̣}}{\upsilon}$ or alternatively, with lowered ι and υ , $\overset{\text{̣}}{\iota}$ $\overset{\text{̣}}{\iota}$ $\overset{\text{̣}}{\upsilon}$. The font even supports $\overset{\text{̣}}{\alpha}$ $\overset{\text{̣}}{\alpha}$. It enables $\overline{\Theta\text{C}}$ to be written. It also contains Roman numerals (albeit in high order codes), thus facilitating verse numbering.

GGTGalatian

GGTGalatian is a much bolder version of GGTEphesian. It should have exactly the same spacing as GGTEphesian. A bold version is needed because the bold setting in a word processor only makes GGTEphesian significantly bolder up to about font size 9 or 10pt.

GGTPhilippian

A modern printed cursive font. GGTPhilippian is mainly based on samples of Greek letters in the following (19th century, uncopyrighted) books by E.W.Bullinger: *Number in Scripture*, p.49; *Figures of Speech Used in the Bible*, App VII.

GGTColossian

GGTColossian imitates an early cursive manuscript hand. It was drawn by Graham G Thomason. It does not currently support any digraphs.

GGTSinaiticusAcc / GGTSinaiticusNac

The GGTSinaiticus- fonts are based on the lithographs of the Sinaitic (Ⲛ) manuscript as exhibited in Scrivener's Plain Introduction to the Criticism of the New Testament, published in 1894, plates I-2 and IV-11b. The Sinaiticus fonts have v=Ⲛ (digraph for HN). The -Nac font expunges accents.

GGTAlexandrinus

The GGTAlexandrinus font is based on lithographs of the codex, but is slightly stylized, typically by thinning (parts of) the letters slightly. It contains accents as for GGTEphesian, but they are not ideal for use with GGTAlexandrinus, as the font has relatively large letter for a given point size, and the font is best used without accents.

A scan of the same page is reproduced on page 9 of *Manuscripts of the Bible* by Bruce M. Metzger.

The -Nac font expunges accents.
